

# Turkey Pavilion

Expo Aichi 2005, Japan

The design of this pavilion is inspired in the Sunni philosophy of the geometry in Nature through the art and culture of Turkey.

Based on this concept and seeking to suggestively re-enforce the different exhibition contents, ACCIONA Producciones y Diseño has created audiovisuals using the latest in technology to create three-dimensional effects.

APD has carried out the project development of the renowned Turkish architect Hilmi Senalp, the direction of the works and the execution of the pavilion, as well as the technical operation of the installation during the 185 days of the exposition.

After being awarded the Gold Medal for the best pavilion in its category, it earned the prize of a million visitors after three months from its inauguration.
